## ABSTRACT

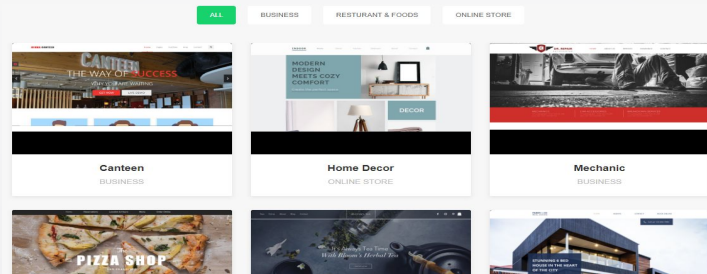

- Easy Website Creator is the website which allows users to edit templates and make effective website.
- This system provides functionality of configuring user templates and it also allows ease of creating websites without having former programming knowledge.
- All different templates are managed by website administrator. The system takes care of maintain user privilege i.e. it should only allow registered members to access certain features.

## MODULE

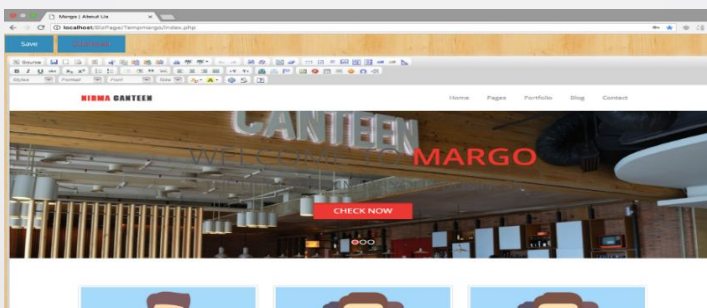

Admin	Visitor	Client
An admin is creating and maintaining database structures to support template content. He / She also take cares of implementing applications to match the overall mission objectives of the website	A visitor can only view the pages such as "Home", "About us", "Contact us", "Services" and "Templates"	Client can create his own by cloning the existing one, without affecting the original template
Provides support for editing tools	If visitor can freely registered himself with an admin approval	Clients can modify website
Manages the number of site users		Clients can also download website

## SYSTEM

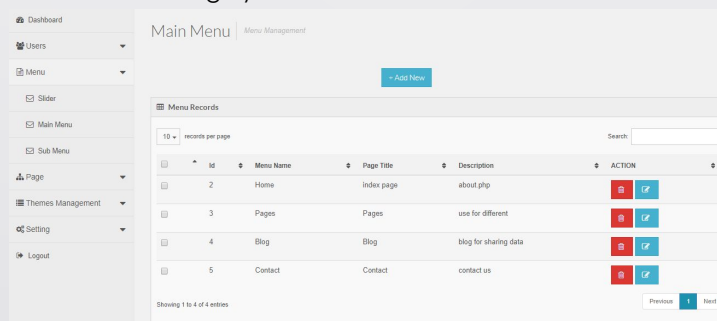

- Multiple Theme Selection

- Select Template and Start Editing

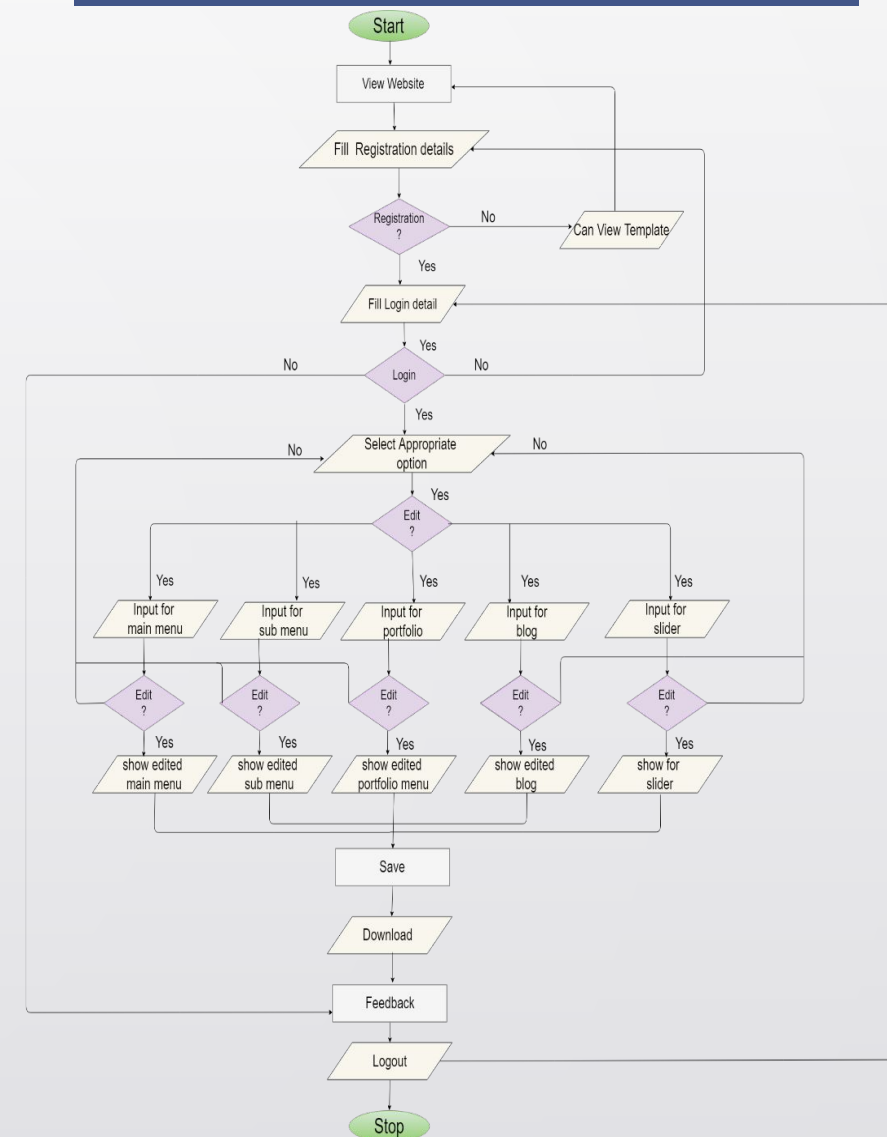

- Menu handling By Admin

## FUNCTIONALITY

- User can select template based on category.
- User can modify template with use of provided editing tool, without affecting the original one.
- User can save modified website and can also download the entire website .

## SYSTEM FLOW DIAGRAM

## FUTURE ENHANCEMENT

- Users would be allowed to make their website accessible over the internet.
- Templates would be extended to allow admin to register different plugins.
